

RAPID

Accelerated Curing System

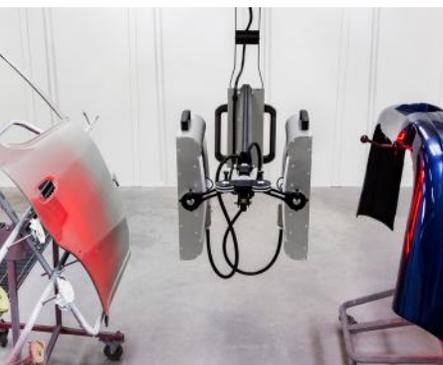

Significantly increase paint shop throughput without having to overhaul your current operation. The REVO Rapid quickly cures fillers and coatings, and produces high-quality repairs. The compact, two-cassette system is designed for full panel repairs or body shops with space restrictions. Choose from an overhead rail system (OR2) or mobile system on wheels (MC2). The flexible REVO Rapid can move virtually anywhere in your paint booth, prep area or shop, and can be easily positioned. Dual sensors on REVO Rapid models allow you to cure coatings on two different substrates at the same time, while maintaining proper temperature.

GET MORE HIGH QUALITY REPAIRS IN LESS TIME – RELY ON REVO.

RAPID | Features & Benefits

Cure Two Panels & Different Substrates

With the dual-cassette REVO Rapid, you can quickly cure fillers and coatings on two different vehicles or panels at the same time. The REVO Rapid has dual sensors, and each cassette can be individually controlled. This allows you to safely and efficiently cure coatings on two different substrates, such as a plastic bumper and a steel door, simultaneously.

Up to 80% More Paint Shop Throughput

REVO Accelerated Curing Systems allow you to do more high-quality repairs in less time. Using short wave electric IR technology, these revolutionary systems cure fillers and coatings quickly from the inside out. Curing time for both prep and paint phases of repair can be reduced by hours, freeing up your technicians to complete additional repairs. Plus, it easily installs within existing shop footprints and uses significantly less energy.

Easy-to-Operate Controls

Simple-to-operate, high-tech controls make consistent, high-quality results easy. Select from preset programs on the large, color, touch-screen control panel for all of the fillers and coatings your shop will use. Sensors on the REVO Rapid detect temperature and distance to achieve the perfect cure. Once the set temperature is reached, the bulbs will pulse to control and maintain temperature. This also extends the life of the bulbs and saves energy.

Quick Heating & Cooling Times

Lamps on the REVO Rapid reach curing temperature almost instantly. Built-in fans cool the unit down in seconds. The system can be turned on only when needed and is safe to touch shortly after being turned off.

Expert Support & Service

All REVO Systems are backed by Global Finishing Solutions to provide support and reliability. Each system has been expertly designed specifically for the automotive repair industry. And with on-site training available, learning to use any REVO System is easy.
