

REVO

Faster Repairs. Better Results.

SPEED

Accelerated Curing System

Dramatically reduce curing time with REVO Speed. It quickly cures filler and coatings completely from the inside out, saving significant time and money. This fast-positioning model is best suited for body shops that perform large volumes of average repairs on one to four panels. With a vehicle clearance of 7 feet, the REVO Speed can accommodate all sizes of passenger vehicles, including cars, trucks, minivans and SUVs, as well as factory lifted trucks.

GET MORE HIGH QUALITY REPAIRS IN LESS TIME – RELY ON REVO.

SPEED

Features & Benefits

Fast, Semi-Automatic Operation

Quickly and easily position the REVO Speed to automatically move based on specifications set into the control panel. There is no need to scan a vehicle or use special plates or markers. Simply place the REVO Speed at the beginning of a vehicle and it will move on its own. The unit returns back to its starting position with the touch of a button.

Up to 80% More Paint Shop Throughput

REVO Speed uses short wave, electric IR technology to offer the fastest curing time in the industry for both prep and paint processes. It shortens repair cycle time and significantly reduces rework. Plus, it easily installs within existing shop footprints.

Easy-to-Operate Controls

Simple-to-operate, high-tech controls make consistent, high-quality results easy. The travel speed and surface temperature are preset, so there's no guesswork for technicians on cure time. Just select the type of material being cured and the lamp sections to be turned on/off during the cure process; then press start.

Saves Time & Money

Cures both filler and coatings from the inside out. REVO IR technology creates a high-quality, complete cure using significantly less energy and reduces the out-of-dust time to just minutes. The ability to turn the lamps on and off helps save on energy and operating costs.

Quick Heating & Cooling Times

Lamps on the REVO Speed reach curing temperature almost instantly. Built-in fans cool the unit down in seconds. The system can be turned on only when needed and is safe to touch shortly after being turned off.

Expert Support & Service

All REVO Systems are backed by Global Finishing Solutions to provide support and reliability. Each system has been expertly designed specifically for the automotive repair industry. And with on-site training available, learning to use any REVO System is easy.
