

RAPID | Accelerated Curing System

Cure primer on 2 panels in less than 11 minutes.

Quickly cure filler and coatings with the REVO Rapid. Producing high-quality repairs, this compact, two-cassette system is designed for full panel repairs or body shops with space restrictions. REVO Rapid is perfect for smaller, quick repair jobs of one to two panels, and can reach any part of a vehicle. Safely and efficiently cure coatings on two different panels simultaneously, while maintaining the correct temperature. REVO Rapid is ideal in prep areas and GFS' Closed-Top Open-Front (CTOF) Booths. Choose from an overhead rail system (OR2) or mobile system on wheels (MC2).

THE ULTIMATE TOOL FOR PAINT AND PREP

RAPID

Features & Benefits

Cure Two Panels & Different Substrates

With the dual-cassette REVO Rapid, you can quickly cure filler and coatings on two different vehicles or panels at the same time. The REVO Rapid has sensors on each panel, and each cassette can be individually controlled. This allows you to safely and efficiently cure coatings on two different substrates, such as a plastic bumper and a steel door, simultaneously.

Increase Paint Shop Throughput

REVO Accelerated Curing Systems allow you to do more high-quality repairs in less time. The REVO Rapid cures primer more than 20 minutes faster than traditional heat lamps, enabling shops to put through one additional car per day. Since curing time for both prep and paint phases of repair can be reduced by hours, technicians are free to complete additional repairs and improve your shop's bottom line. Plus, the REVO Rapid easily installs within existing shop footprints and uses significantly less energy.

Easy-to-Operate Controls

Simple-to-operate, high-tech controls make consistent, high-quality results easy. Select from preset programs on the large, color, touch-screen control panel for all of the filler and coatings your shop will use. Sensors on the REVO Rapid detect temperature and distance to achieve the perfect cure. Once the set temperature is reached, the bulbs will pulse to control and maintain temperature. This also extends the life of the bulbs and saves energy.

Quick Heating & Cooling Times

Lamps on the REVO Rapid reach curing temperature almost instantly, and built-in fans cool the unit in seconds. The system can be turned on only when needed and is safe to touch shortly after being turned off.

Expert Support & Service

REVO Systems are backed by Global Finishing Solutions for reliable service and support. Spare parts for all REVO models are readily available at GFS' U.S. facility, and can be shipped overnight, decreasing costly downtime and eliminating the need to store backup parts. Visit GFS' Center for Excellence training facility to see what REVO Systems have to offer before purchasing. Onsite training is also available, so learning to use REVO is easy.
