

Faster Repairs. Better Results.

SPOT | Accelerated Curing System

Cure 2- to 4-hour primer
in 6 to 8 minutes.

Significantly reduce primer cure time with the REVO Spot. This impressive tool is the ideal solution to quickly cure small, 3-by-3-foot areas. Available on a rolling cart, the single-cassette REVO Spot can be effortlessly moved into any paint booth, prep station or virtually any area in a shop. In addition to curing body filler, as well as spray-on and roll-on primer, this unit is well suited for applications like aluminum repair, bumper repair and dent removal.

THE ULTIMATE TOOL FOR PRIMER AND FILLER

SPOT | Features & Benefits

Durable, Mobile Cart

With its strong, durable cart, the REVO Spot can be easily maneuvered around your shop to wherever you need it. This compact unit takes up a minimal amount of valuable floor space. Although small, the 6-kw REVO Spot is a powerful tool for curing most coatings within minutes.

Increase Shop Throughput

REVO Spot significantly reduces primer cure time to get one more car to the paint department per day. Using short wave electric IR technology, this innovative tool cures filler and primer quickly from the inside out. Cure time is reduced by hours, freeing up your technicians to complete additional repairs.

Multi-Functional Tool

This versatile tool can help your shop be more productive. In addition to rapidly curing filler and primer, REVO Spot is well suited for many other applications, including dent removal, aluminum repair and bumper repair. Simply heat up the aluminum-body vehicle or bumper to relieve stress and repair the area.

Easy-to-Operate Controls

The REVO Spot is easy to use. Simply turn the knobs to set the curing time and temperature. A temperature sensor automatically adjusts the lamp to ensure you don't overcure or undercure the coating. Once the set temperature is reached, the bulbs will pulse to control and maintain temperature. This also extends the life of the bulbs and saves energy.

Quick Heating & Cooling Times

Lamps on the REVO Spot reach curing temperature almost instantly. Built-in fans cool the unit in seconds. The unit can be turned on only when needed and is safe to touch shortly after being turned off.

Expert Support & Service

REVO Systems are backed by Global Finishing Solutions for reliable service and support. Spare parts for all REVO models are readily available at GFS' U.S. facility, and can be shipped overnight, decreasing costly downtime and eliminating the need to store backup parts. Visit GFS' Center for Excellence training facility to see what REVO Systems have to offer before purchasing. Onsite training is also available, so learning to use any REVO System is easy.
